

Quick Vision Active

Up to 25% Off

Efficient, Easy-to-Use, Fast, Accurate & Now A Deal of A Lifetime

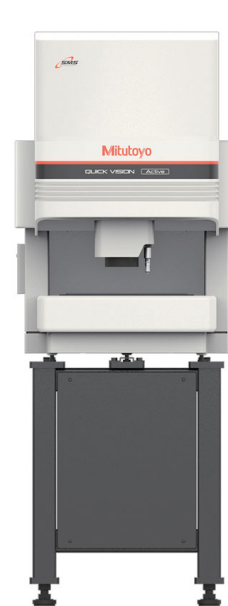

The Quick Vision Active combines flexibility and quality for accurate 3D non-contact measurements in a single unit that is now priced like never before. For a limited time, this is your opportunity to purchase one of the most versatile Mitutoyo CNC vision systems at a great value price that includes installation, calibration and training.

Non-contact Measurements at a Great Value

The Quick Vision Active systems use advanced optical and image processing technology to capture and analyze images of the parts being measured.

The QV Active includes high-resolution cameras, advanced illumination systems, automatic edge detection and CAD interface, for highly accurate non-contact 3D measurements, all in a compact CNC model.

These systems can measure complex parts with high accuracy and speed, providing valuable information for process control and optimization, now at an amazing price. When you purchase a QV Active, you also receive installation, calibration, training, QVPak software, MeasurLink® software, and a computer and monitor.

Newly Released QVPak 14.1 Software

The Quick Vision Active series machines come with the recently updated QVPak 14.1 which is a fully 3D software designed to program Mitutoyo CNC vision measuring systems.

QVPAK 14.1 adds several new features, including: importing a CSV file of positions, saving measurement results in pdf format, and automatic saving of video images during a part program run.

QVEasyEditor within QVPak makes writing part programs easier and faster than ever before. Additionally, icons make the part program commands immediately recognizable, simplified terminology reduces part program complexity, and hierarchical organization intuitively portrays relationships between commands.
